PROFESSIONAL EXPERIENCE

Jul 2019 – Mar 2023 **Software Development Engineer**, **EBS Client Software**, *Amazon.com –Seattle, Washington, USA*

EBS Client team for Amazon Elastic Block Storage (EBS - https://aws.amazon.com/ebs/)

- Built scalable, deployable, & high-performance software support for EC2 instance launch and network data storage attachment
- Major deliveries:
  - Developed and launched an off-droplet control plane service for EBS volume attachments - a tier 0 micro-service that offloads droplet workload; leading to reduced CPU usage and secured communication between the control plane and customer instances
  - Led multitude of operational and reliability improvements in the deployment pipeline to ensure the service is well-equipped to handle heavy traffic, and releases happen smoothly and safely with minimal intervention.
  - Collaborated with multiple teams to extend and implement the Gameday test platform to support new EBS features – enabling support of new NVMe feature in EBS for handling more clustering workloads
  - Innovated a simplified framework that integrates EBS Client Test suite with Gameday test platform; to validate EBS features with server error/fault injections, which helps overcome the current challenges faced during testing
- Operations and Infrastructure:
  - Expertise in infrastructure pipelines that allow safe, automatic, continuous deployment of infrastructure and service code for multiple microservices
  - Extensive contributions to team on-call duties with bias towards remediating customer-facing issues with high priority, and prioritizing improved customer experience
  - Led multiple end-to-end feature deployments through CI/CD pipelines for various EBS Client services
  - Strategized and owned multiple deployment and mitigation plans to unblock major feature deployments, with a focus on long-term solutions to improve launch efficiency
  - Contributed consistently to internal team documentation to promote knowledge sharing within the team and fellow engineers
  - Mentoring new members of the team by helping them onboard to tools and services used by the team and leading multiple demo sessions

Jun 2018 – Dec 2018 **Software Development Intern**, *4C Insights (currently Mediaocean) – Chicago, Illinois, USA*

- Enhanced client's experience for LinkedIn on "Scope", a CEP (Closed Ecosystem platform), in order to collect data from social media interactions like Ads/Clicks for better business insights; using modern technologies – Ember.js, Immutable JS, Redux and Python.

Aug 2015 – Sep 2017 **Research and Development Engineer,** *Hewlett Packard Enterprise – Bangalore, Karnataka, India*

- Extended disaster recovery solutions in Serviceguard to ensure high availability for metrocluster using huge storage arrays - 3PAR, EVA , XP and SRDF, with virtualization technologies like Hyper-V
- Released SG to more business clients by advancing support for new toolkits - with Oracle Dataguard, IVS, NFS
- Reduced 70% of manual testing to analyze CRON jobs patterns through structured automation systems, using Shell scripting and C++

Jan 2015 – May 2015 **Software Intern Web Developer,** *Zomato – Gurgaon, Haryana, India*

- Transformed an entirely manual Employee Feedback System to an automated web platform for the HR department
- Increased app's user engagement through stronger back-end and consistent data handling, using technologies like PHP, JS, HTML/CSS and MySQL
- Solved business problems through improved analysis of restaurant data by creating effective BI solutions and data visualizations using dashboards, heat maps generator etc. for all clients using JS libraries

EDUCATION

Dec 2018 **Master's of Science: Computer Science,** *Northwestern University, Evanston* **GPA 3.72**

Coursework: Intensive Program Design, Database Systems, Machine Learning, Deep Learning, Artificial Intelligence, Natural Language Processing, Social Media Mining, Text Mining and Recommendation Systems

Jun 2015 **Bachelor's of Technology: Information Technology,** *Vellore Institute of Technology – Vellore, India* **GPA 3.65**

Coursework: Programming in C/C++/Java, Object Oriented Programming, Data Structures and Algorithms, Database Systems, Data Mining and Warehousing, Web Technology, SWE Principles, Probability and Statistics

SKILLS

- Programming: Python, C++, Shell Script, Java, Ruby
- Amazon Web Services: EC2, EBS, CloudFormation, CloudWatch, S3, Systems Manager (SSM), Identity and Access management (IAM)
- Worked on OSX, Linux, Windows
- Web technologies: HTML5/CSS3, JavaScript, jQuery, PHP, Bootstrap
- Data Analytics: MySQL, R, Oracle, Dynamodb
- Data Science: Machine Learning, Natural Language Processing, Deep Learning, Statistics
- Tools/Packages: SciPy, NumPy, MatplotLib, SciKit-learn
- Agile and Scrum technologies: Git, SVN

ACADEMIC PROJECTS

May 2018 – Jun 2018 **World Leader Similarity Prediction**

Designed a platform for New York Times economics research that determines similarity of opinions between two individuals, by analyzing their tweets. Further used this to match individuals with world leaders that share their views, and to figure out which soccer teams they are likely to support. It handles tweets in multiple languages and uses Flask, Elastic Search, NLTK to generate the results.

May 2018 – Jun 2018 **Hate Speech Analysis with Reddit**

Performed temporal analysis of spikes in hate speech on Reddit posts over the years. The posts are broadly categorized using deep learning with RNN/LSTM models, and most influencing events are detected using topic modeling techniques.

Nov 2018 – Dec 2018 **Grocery Store Recommendation System**

Built a recommendation system for one-time buyers in a grocery store. The system uses a hybrid of collaborative filters, non-personalized methods and factor analysis with optimized tuning of parameters in ‘R’ for the recommendations.
